

DURGA SAI BHARADWAJ RACHARLA

FULL STACK DEVELOPER

+1 2262422778 | durgasai.bharadwaj81@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Toronto, Canada

Professional Summary

Full-Stack Developer with **4+ years** of experience designing, building, and maintaining scalable web applications using **Python, Java, JavaScript, and SQL**. On the front end, craft responsive and accessible interfaces with React.js, HTML5, and CSS3; on the back end, develop RESTful APIs and microservices with Flask and Django, integrating robust server-side logic and third-party services. Skilled in data modeling and performance tuning across **PostgreSQL, MySQL, MongoDB**, and **Redis** for caching and throughput. Hands-on with **AWS**, including **EC2, S3, Lambda**, and **SageMaker**, plus **Docker** for containerization and **Jenkins** for CI/CD to automate reliable releases. Collaborative team player with strong communication skills; contributes in **Agile/Scrum** environments using **JIRA** for tracking and clear documentation.

Skillsets

- Programming Languages:** Python, Java, JavaScript, SQL, TypeScript
- Web Development:** Flask, Django, React.js, Node.js (Express.js), HTML5, CSS3, Spring Boot, Next.js
- State Management & API Technologies:** Redux, Context API, RESTful APIs, GraphQL, Swagger/OpenAPI
- Databases:** PostgreSQL, MySQL, MongoDB, Redis
- Messaging Systems:** RabbitMQ
- Cloud & DevOps:** AWS (EC2, S3, Lambda, SageMaker), Docker, Jenkins
- Version Control & CI/CD:** Git, GitHub, GitLab
- Software Development Tools, Testing & QA:** JIRA, Visual Studio Code, Jupyter Notebook, Postman, Jest, JUnit

Education

- Post-Graduate Certificate** in AI With Machine Learning, Humber International College | Canada 04/2024
- Bachelor of Science** in Computer Science, CMR Technical Campus (JNTUH) | India 08/2020

Experience

Full Stack Developer	Citibank, Canada	07/2024- Current
- Managed the development of scalable, high-performance web applications using React.js, Node.js (Express.js), and Spring Boot, increasing customer engagement and satisfaction. - Implemented RabbitMQ for efficient asynchronous communication between microservices, significantly improving the scalability and reliability of message-driven architectures. - Created and optimized RESTful APIs and microservices in a cloud-native environment, utilizing AWS services (EC2, Lambda, S3) for high availability and scalability. - Enhanced data management and performance with PostgreSQL and MongoDB, improving query response times through indexing and schema optimization. - Integrated machine learning models into production workflows using AWS SageMaker, automating data analysis and increasing system efficiency. - Improved CI/CD pipeline with Jenkins and Docker, reducing deployment times and streamlining testing and deployment. - Collaborated in Agile/Scrum teams, contributing to sprint planning, daily stand-ups, and code reviews, improving team velocity and code quality. - Used Swagger/OpenAPI to document and standardize API interfaces, ensuring seamless communication between front-end and back-end teams. - Performed unit and integration testing with Jest and JUnit, ensuring robust application stability and comprehensive test coverage		

Software Engineer**Tata Consultancy Services, India****03/2022 - 09/2023**

- Developed and maintained 6+ Java-based applications using Spring Boot in an Agile environment, enhancing system stability and meeting performance requirements
- Optimized PostgreSQL queries and implemented database improvements, reducing retrieval times and enhancing system performance
- Designed secure APIs with FastAPI, integrating machine learning models and handling large volumes of requests for scalable production systems
- Implemented microservices architecture with Spring Boot and Docker, improving system modularity, scalability, and maintainability
- Integrated third-party APIs and webhooks for real-time data synchronization, boosting system integration efficiency
- Streamlined CI/CD processes with Jenkins, reducing deployment times and increasing development velocity

Software Engineer**Medibliss Transactions, India****08/2021 - 03/2022**

- Delivered and deployed an Android application to the Google Play Store, achieving 5000+ downloads and maintaining high user ratings
- Monitored live app performance and resolved 50+ bugs and crashes, significantly improving app stability and load times
- Developed an Android app for Multi Commodity Exchange (MCX) using Java, Kotlin, and ML Kit SDK, enabling real-time trading, market analysis, and price prediction with RESTful APIs
- Optimized Android app performance by focusing on memory management and efficient data retrieval, resulting in faster execution and better resource usage
- Integrated third-party libraries and APIs, including Firebase and Google Maps, to expand app functionality and improve user satisfaction

Junior Software Engineer**Medibliss Transactions, India****08/2020 - 08/2021**

- Assisted in the development and maintenance of web applications using Java and Spring Boot, focusing on backend services and API development
- Contributed to front-end development tasks with HTML, CSS, and JavaScript, working closely with front-end engineers to build responsive user interfaces
- Developed an Android application for Intellihub, enabling users to view real-time cryptocurrency prices, trade cryptocurrencies, and analyze historical data, handling both front-end and back-end development
- Designed and implemented database schemas in PostgreSQL and MySQL, writing efficient queries for data retrieval and reporting
- Participated in Agile development cycles, attending sprint planning, daily stand-ups, and retrospectives, ensuring timely delivery of project milestones
- Gained hands-on experience with cloud platforms like AWS, deploying applications, and learning cloud service configurations

Projects

- **Trackr – Full-stack AI Job Application Tracker** ([live](#)): Developed a full-stack job tracker with Spring Boot, React, and MySQL, including a Chrome MV3 extension for auto-scraping job details, integrating Gmail API with OAuth2 for automatic email syncing, and a user-friendly dashboard for seamless application management.
- **Crypto Trading Platform – Live Market Dashboard**: Built a microservices-based crypto trading platform with Spring Boot, FastAPI, and React, integrating Binance and Kraken APIs, containerized with Docker, and deployed on AWS EC2 and S3 for scalability
- **E-commerce Website – Next.js & Typescript** ([live](#)): Built a full-stack e-commerce app with Next.js, TypeScript, Prisma, and Supabase, integrating Clerk for authentication, Stripe for payments, and an admin dashboard for inventory and image management
